The KONTI range of high performance, auto-tie channel balers was first launched in

1985

For more than 35 years, the KONTI range has been at the cutting edge of baler technology with a new KONTI series typically introduced every 3 – 4 years, incorporating all of the latest technical developments. Sometimes, however, the incessant drive to progress and move forwards results in some of the traditional features being discarded and overlooked.

The new KONTI J-series was, therefore, designed and developed by looking to the past as well as looking to the future and, throughout the design process, there was a continual focus on the core characteristics that have traditionally been associated with the KONTI range. As a result, there has been a real emphasis on the robustness and reliability of the KONTI J which can be seen in the big increases (of up to 30%) in the baler weights across the KONTI J range.

2020

So the new KONTI J is much bigger, stronger and heavier than the i-series but yet it also incorporates a host of clever new technical advancements and features. As such, the KONTI J is truly the baler where tradition meets technology.
